

CRYSTAL WATER FILTER

Instructions For Changing Media

- Remove inlet and outlet connection pipes on the filter.
- Screw off the head of the filter and pull out the riser tube.
- Tip the used resin out of the vessel.
- Stand the vessel on a level floor and place the riser tube inside the vessel so that it rests on the bottom of the vessel.
- Cover the top of the riser tube to ensure no resin falls down into the tube.
- Pour your replacement media into the vessel.
- Remove your cover from the top of the riser tube.
- Place the filter head onto the top of the riser tube, push down and screw the head onto vessel.
- Re-connect your inlet & outlet pipework.

The 6 litre tank will provide up to 700L of water before the filter media needs changing, the 25 litre tank will provide up to 2800L of water before the filter media needs changing.
