

HYUNDAI

POWER EQUIPMENT

Hyundai DHYC50LE

Suitable for liquid fertiliser or seawater or other similar corrosive chemicals. This pump is powered by Hyundai's 6hp OHV 4-stroke diesel engine, with electric start and its own 12v battery. Making this easy starting machine a pleasure to use.

The pump has a corrosion resistant plastic body, with a flow rate of 500 litres a minute. Compared to smaller horsepower petrol pumps on the market, this diesel pump gets the job done in less time and is more economical to run, using red diesel commonly found on the farm or fishing boat.

The DHYC50LE does not require any electrical supply. This is beneficial for two reasons. Firstly, it is advantageous in terms of safety, as there is no risk of electrocution. Secondly, this makes the DHYC50LE ideal for use in remote and rural locations where there is no electric supply nearby.

Specification:

- Engine: Hyundai D300 Direct injection Diesel OHV 4-stroke single cylinder
- Max. Power: 6hp
- Starting system: Electric start with 12v battery and recoil pull start
- Pump: 2" / 50mm plastic corrosion resistant rotary pump
- Flow rate: 533l/min (32,000l/hr)
- Max. Head: 30m
- Weight: 50kg
